

If you're considering dental implants, why not take a look at the answers to the questions we are regularly asked by our patients.

Q. Can anyone have implants?

Dental implants are suitable for most adults who are in good health and have healthy gums. They are not suitable for children and young people under the age of 18 as their bones are still growing.

There are a few scenarios where your dentist may not recommend implants:-

- If you are a smoker.
- Have had radiotherapy to your jaw area.
- Have uncontrolled diabetes.
- Suffer from uncontrolled or active gum disease and receding gums.

If you have any medical problems, do have a chat with us and we can let you know if dental implants will be suitable for you.

Q. How long do implants last?

Many people choose dental implants over dentures as they are a more permanent option. Dentures only tend to last for 5-10 years. Dental implants are a long-term solution that means you don't really need to think about your teeth. We have patients who have had their implants for over 20 years and as long as they are looked after, they should last a lifetime.

Latest evidence suggests that 95% of dental implants will last for 15 years or more.

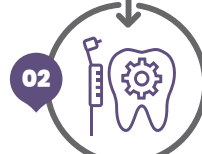

At Confidential, we also offer payment plans to help spread the cost of your dental implant treatment.

Our Promise To You

We Show Empathy

It pays to listen – we deliver patient-centred care at all times. We treat everyone as we would like to be treated ourselves. We will be CALM and CARING.

Quality Equipment

We use cutting edge technology, only the very finest quality dental materials and superlative tested dental laboratories.

We Exceed Expectations

Our engaged, highly trained, fully dedicated team and support staff are always available to ensure satisfied patients.

Environmentally Friendly

We are committed to protecting the environment whilst ensuring the highest level of safety and cleanliness possible.

Pain Free Treatment

We always strive to deliver a pain-free experience by constantly developing and improving our techniques.

Exceptional Aesthetic Results

We are passionate about the quality of our work and providing outstanding smiles and beautiful aesthetic dentistry at all times. Our dental technicians and ceramists are master craftsmen in their own right.

RESTORE YOUR SMILE

Dental Implants Our Guide

“ I was apprehensive about dental implants at first but it's the best thing I've done. They are just like normal teeth, I wouldn't be without them. The treatment was very good, kind and caring.” – Brian –

Advantages of dental implants

01 Improve your confidence

If you are ever worried that your denture will move or slip, then the fixed security and life-like appearance of dental implants will help.

02 Enjoy your favourite foods

Because dental implants are fixed you can eat what you like, and because there is no palate you can taste things again, and appreciate hot foods, or that cold beer!

03 Natural, life-like appearance

Dental implants offer a beautiful natural appearance and can match your other existing natural teeth or can be used to improve your appearance and smile.

04 Better for your oral health

Unlike bridges, dental implants do not damage adjacent natural teeth; and unlike dentures, they do not encourage food and plaque build-up between supporting teeth.

“ I had no pain, which was absolutely wonderful. I can't stop smiling!” - Berryl -

05 Long-lasting solution

Provided they are carefully cleaned and looked after, dental implants will usually last longer than crowns, bridges or dentures. If you maintain them well and your mouth stays healthy, then they will last years and probably for your lifetime.

06 Preserve healthy bone

When your natural tooth is removed, the bone within the jaw that supported it dissolves away. Placing a dental implant to replace the tooth helps to conserve that bone and avoids the appearance of a shrunken jaw.

07 No more taking your teeth out at night

Because dental implants provide a fixed tooth replacement, there is no need to remove them at night time.

08 Substitute for a natural tooth root

Made from titanium, dental implants can be used to replace individual teeth, larger gaps or even all the teeth in a jaw. They are also used to stabilise a removable denture.

09 Precision placement

Here at Confidential, we use a 3D x-ray /Cone Beam CT Scan to accurately and safely place the dental implant. Using cone beam technology takes the guesswork out of implant surgery. We know exactly where to place the implant and if there is sufficient bone beforehand.

10 Love your smile again

Dental implants are as close as it is possible to get to a natural tooth, for both function and appearance.

Still unsure? Visit us for a FREE implant consultation with our smile advisor, who will be happy to answer any of your questions.
